# Cómo lo implementamos?

# Endovascular balloon occlusion of the aorta is superior to resuscitative thoracotomy with aortic clamping in a porcine model of hemorrhagic shock

Joseph M. White, MD,<sup>a</sup> Jeremy W. Cannon, MD,<sup>a,c</sup> Adam Stannard, MRCS,<sup>a,b</sup>  
Nickolay P. Markov, MD,<sup>a</sup> Jerry R. Spencer, RVT,<sup>a</sup> and Todd E. Rasmussen, MD,<sup>a,c</sup> San Antonio, TX,  
Birmingham, UK, and Bethesda, MD

**Conclusion.** Resuscitative aortic BO increases central perfusion pressures with less physiologic disturbance than thoracotomy with aortic clamping in a model of hemorrhagic shock. Endovascular BO of the aorta should be explored further as an option in the management of noncompressible torso hemorrhage. (*Surgery* 2011;150:400-9.)

***Surgery 2011;150:400-9.***

## Forty-Minute Endovascular Aortic Occlusion Increases Survival in an Experimental Model of Uncontrolled Hemorrhagic Shock Caused by Abdominal Trauma

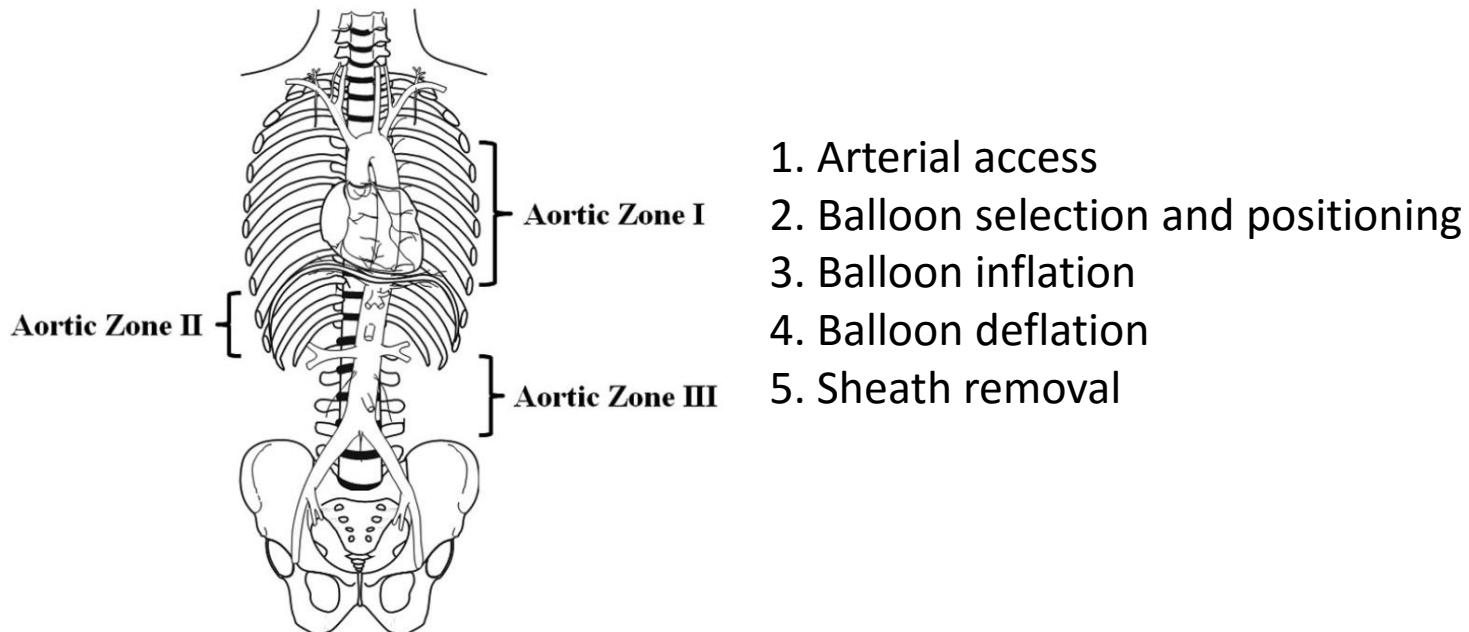

*Jean-Philippe Avaro, MD, PhD, Vincent Mardelle, MD, Antoine Roch, MD, PhD, Celine Gil, MD, Cécile de Biasi, MD, Manuela Oliver, MD, Therry Fusai, MD, PhD, and Pascal Thomas, MD, PhD*

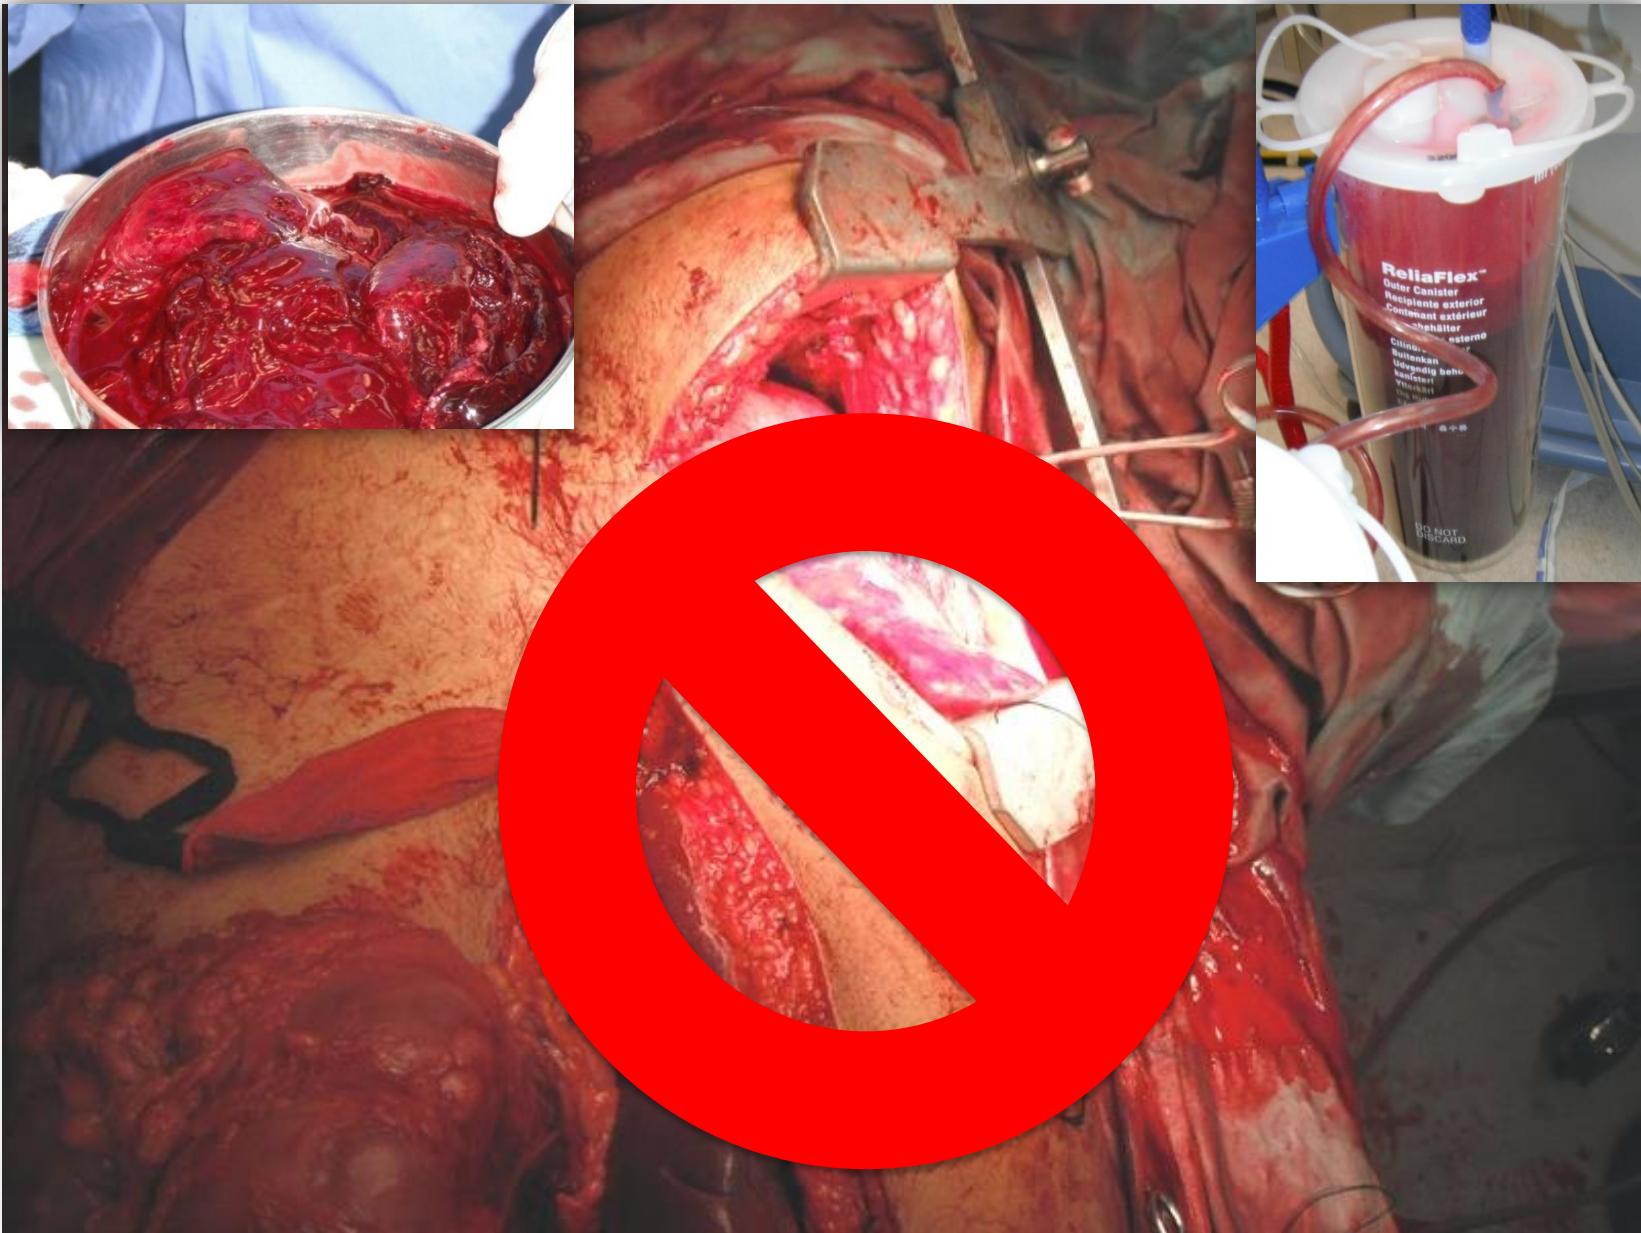

**Conclusion:** A 40-minute ABO followed by surgical damage control improved survival in this animal model of uncontrolled hemorrhagic shock caused by abdominal trauma. ABO could be considered for the management of severe abdominal trauma.

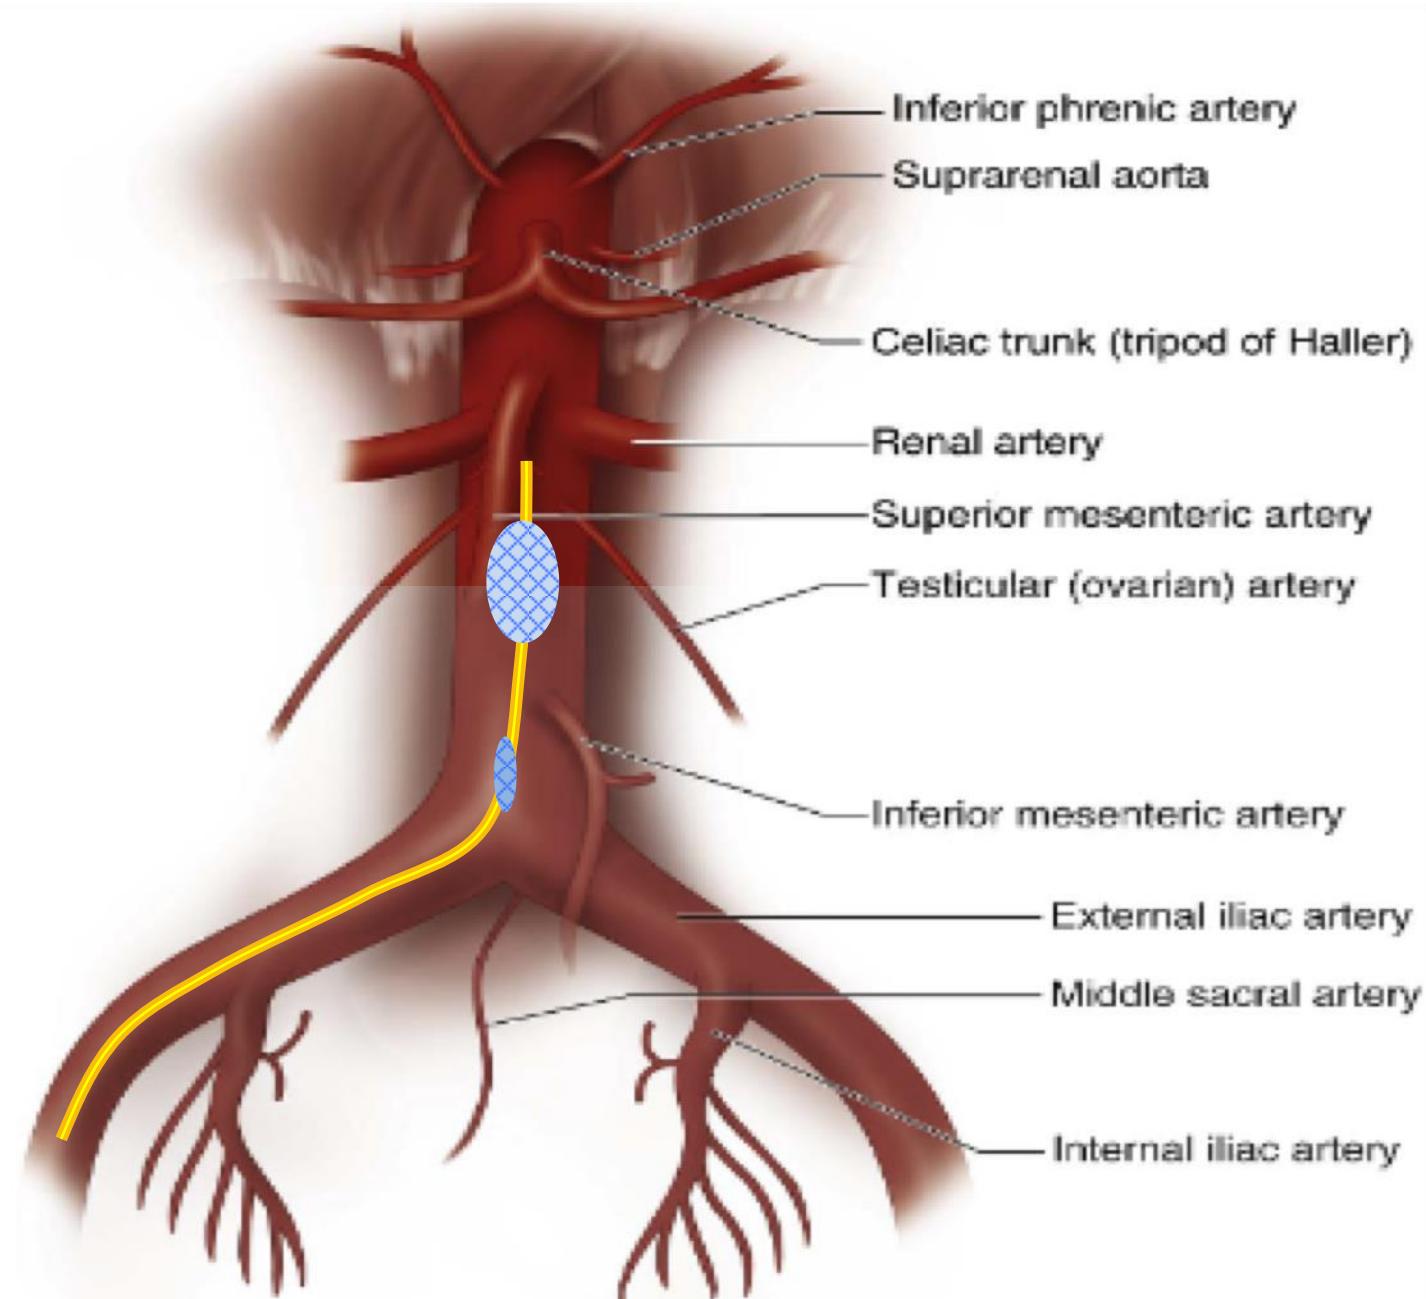

***J Trauma. 2011; 71: 720–726)***

## Resuscitative Endovascular Balloon Occlusion of the Aorta (REBOA) as an Adjunct for Hemorrhagic Shock

*Adam Stannard, MRCS, Jonathan L. Eliason, MD, and Todd E. Rasmussen, MD*

***La ciencia explica “la luz al final del túnel”***

## A clinical series of resuscitative endovascular balloon occlusion of the aorta for hemorrhage control and resuscitation

Megan L. Brenner, MD, Laura J. Moore, MD, Joseph J. DuBose, MD, George H. Tyson, MD,  
Michelle K. McNutt, MD, Rondel P. Albarado, MD, John B. Holcomb, MD, Thomas M. Scalea, MD,  
*and Todd E. Rasmussen, MD*

---

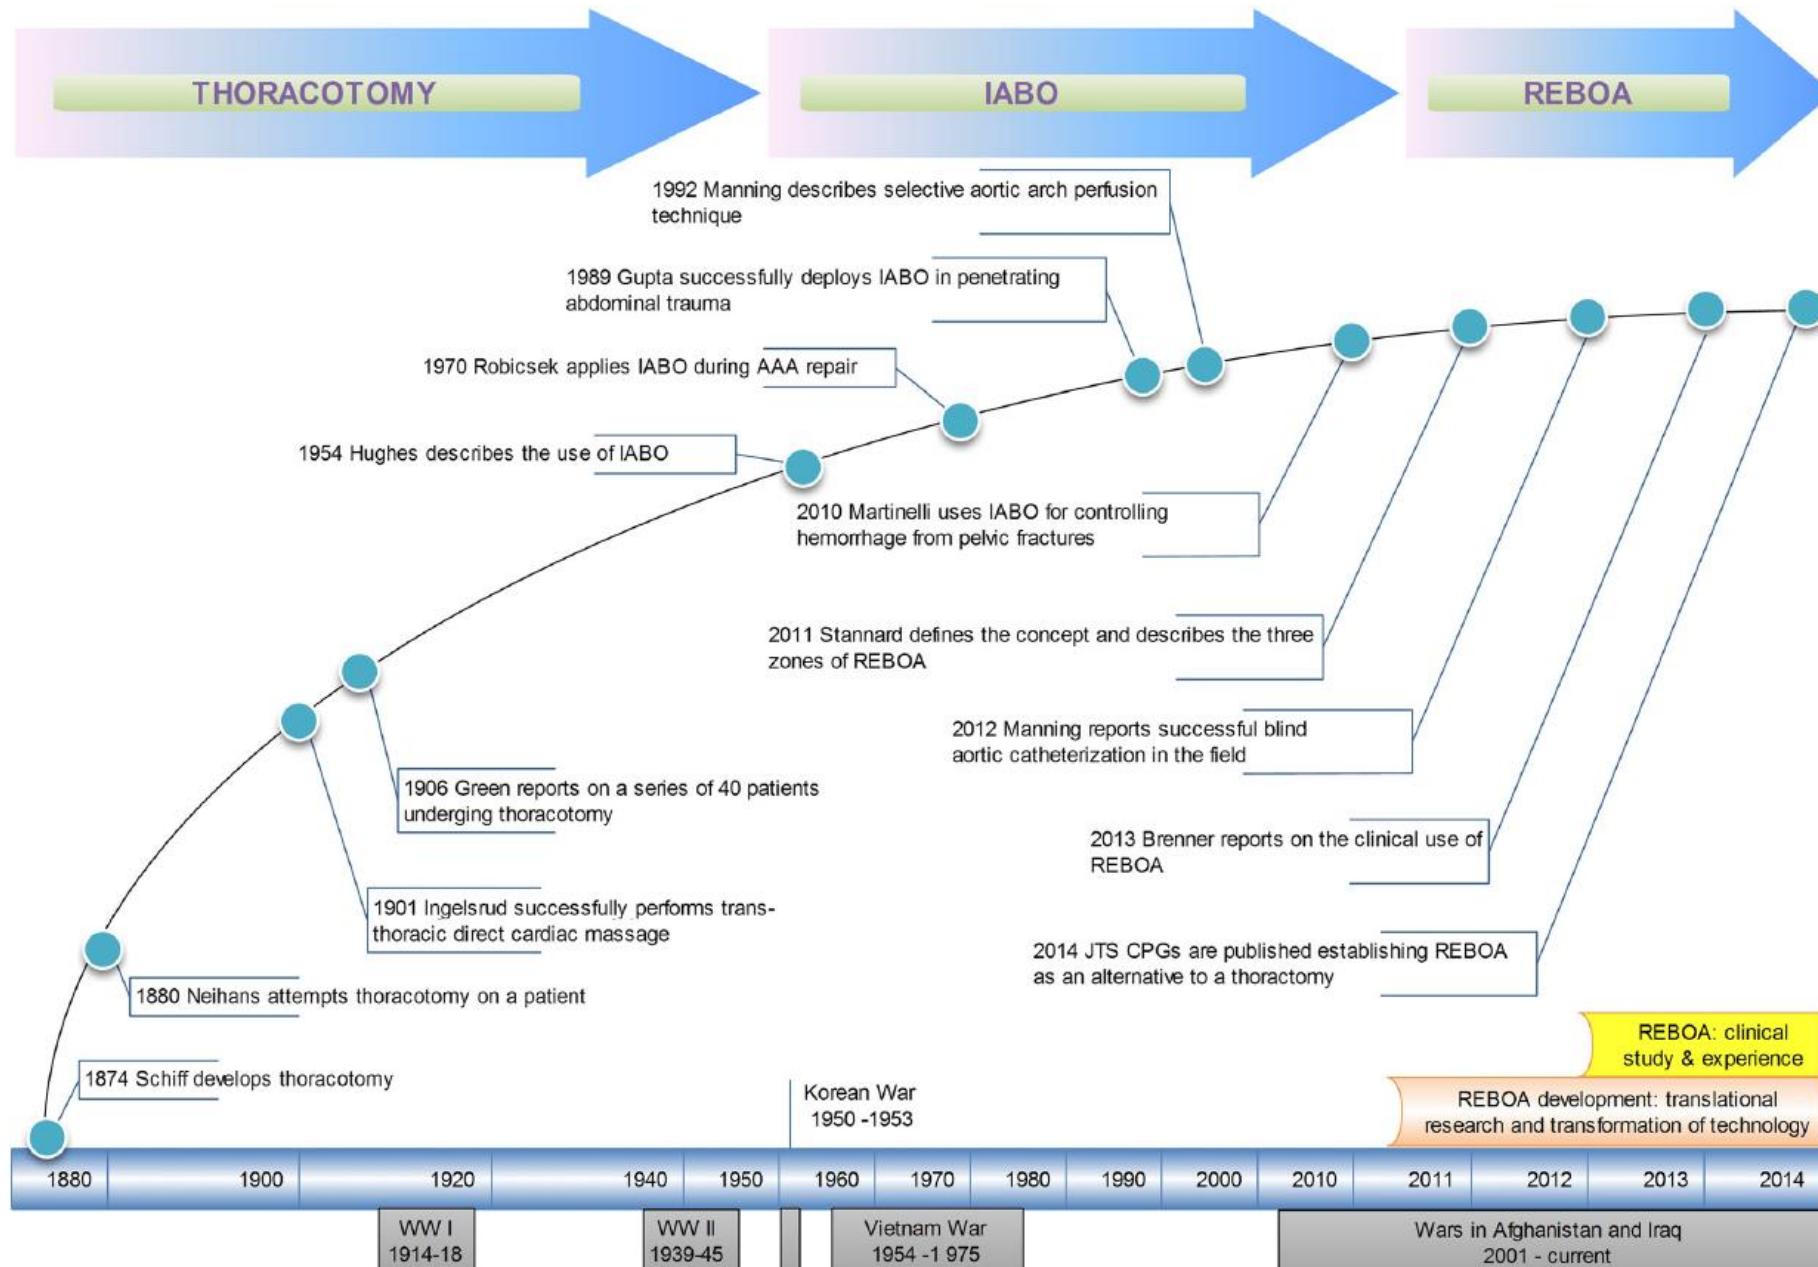

**Conclusion:** REBOA is a feasible and effective means of proactive aortic control for patients in end-stage shock from blunt and penetrating mechanisms. With available technology, this method of resuscitation can be performed by trauma and acute care surgeons who have benefited from instruction on a limited endovascular skill set.

## Resuscitative endovascular balloon occlusion of the aorta for hemorrhage control: Past, present, and future

**Slava M. Belenki, MD, Andriy I. Batchinsky, MD, Todd E. Rasmussen, MD,  
and Leopoldo C. Cancio, MD, San Antonio, Texas**

### **REBOA EL FUTURO:**

1. Expandir el conocimiento
2. Usar nuevas tecnologías
3. Entrenar a los cirujanos
4. Integrar la investigación clínica y de laboratorio
5. El REBOA es una nueva herramienta en el control de daños
